| 2  | Pointing out errors / limitations / repercussions | Explain why the issue can not be solved by the newcomer's solution. Experts usually provide the negative repercussions to prove their views. | <a href="https://github.com/serverless/serverless/issues/8935">https://github.com/serverless/serverless/issues/8935</a> | N1: @alexshelkov @pgrzesik I'm a little confused, why not just remove EnabledMfas from the config?<br>E1: Imagine that your MfaConfiguration is set via env var, and it can be on or off for some environments. So you have to change EnabledMfas based on MfaConfiguration. Valid values for EnabledMfas is a list, string or not existing in the config (ie null). So in case of MfaConfiguration = OFF => EnabledMfas have to be not existed (or null and later Serverless can strip it from config) or you will get AWS errors. There are a lot of similar use cases where AWS don't support anything except not existing settings. |
|    |                                                   |                                                                                                                                              | <a href="https://github.com/serverless/serverless/issues/8497">https://github.com/serverless/serverless/issues/8497</a> | E1: Assigning a property to a plugin instance, while should in most cases be harmless, it's destructive, note that we're interferring into plugin API, we can't be sure if we won't break things.                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|    | reference / example               | for newcomers to solve this issue.                                                         | ft/LightGBM/issues/3833                                                                                               | implemented, but it would be helpful if you could tell me how I shall navigate/proceed to make the change?<br>E1: You can look at the changes I made in <a href="https://github.com/microsoft/LightGBM/pull/3786/files">https://github.com/microsoft/LightGBM/pull/3786/files</a> for reference. I eliminated a test in there called test_classifier_proba, and just moved its contents into the test test_classifier. To close this issue, do the same with the local_predict tests. |

|    |                                                             |                                                                                                 | <a href="https://github.com/shogun-toolbox/shogun/issues/3537">https://github.com/shogun-toolbox/shogun/issues/3537</a> | <p>N1: @karlnapf i want to take this up.</p> <p>Is serialisation module implemented or not. Or should we only implement the testing part of it.</p> <p>E1: We have serialization working at the moment (at least in theory). The details under the hood will soon be replaced, but that doesn't matter for this task.</p> <p>Try to come up with a simple way to test serialization / de-serialization of all models.</p> |
| 29 | Encouragement                                               | The expert encouraged the newcomer not to feel difficulties and pressure.                       | <a href="https://github.com/neovim/neovim/issues/1474">https://github.com/neovim/neovim/issues/1474</a>                 | <p>E1: Sorry for the wall of text, and it's really not as daunting as it may sound, I promise :). Just start hacking around on things and creating a PR and we'll guide you from there.</p>                                                                                                                                                                                                                               |
| 30 | Unclear how to link the PR and issue                        | The newcomer was unclear how to link the PR to its corresponding issue.                         | <a href="https://github.com/neovim/neovim/issues/1474">https://github.com/neovim/neovim/issues/1474</a>                 | <p>N1: Lastly is there a way to link this PR to issue #1474? I don't want someone else to start working on this accidentally. I'm not sure if I missed a step in the process-- I'm still trying to get up to speed with github.</p>                                                                                                                                                                                       |
| 31 | Unclear about the dependences /priority of different issues | Some issues have priority, so the newcomers was confused which issues should be firstly solved. | <a href="https://github.com/neovim/neovim/issues/1474">https://github.com/neovim/neovim/issues/1474</a>                 | <p>N1: So, it appears to me that it's taking way longer than expected to address issue #1476.</p> <p>Would it be okay for me to implement a fix for this again and try to actually get this merged?</p> <p>Or should we just wait for #1476? (If that is the case, why isn't this closed?)</p>                                                                                                                            |
